

World Antimicrobial Awareness Week

Antimicrobial resistance (AMR) is a pressing global health challenge. It has significant impacts on human and animal health, food production and the environment.

AMR occurs when bacteria, viruses, fungi and parasites change in some way and no longer respond to antimicrobial medicines that used to kill them.

This True/False Quiz is designed to help everyone learn more about AMR and how we can all play a part in preventing it.

Take the quiz 

For every submitted quiz, Health Innovation East will make a £1 donation to Antibiotic Research UK.*
